

Purple: CB8 matched to the short-range Ising expansion at the star (2d to second order, 3d to first order). Blue: GFF series alone, CB8 (dash-dot) and CB3 (dotted).

Red star: short-range Ising point (2d exact, 3d bootstrap). HT: finite cutoff, not continuum values. Published MC: one color and shape per reference (legend), quoted errors; coincident markers shifted slightly.

Not drawn: prescription dependence, at most 5.2×10^{-3} (2d) and 1.5×10^{-4} (3d); 2d endpoint construction, up to 7.5×10^{-3}. Angelini et al. (2014) at $\sigma = 7/4$ omitted.
